

## Working Remotely Is Now More Engaging

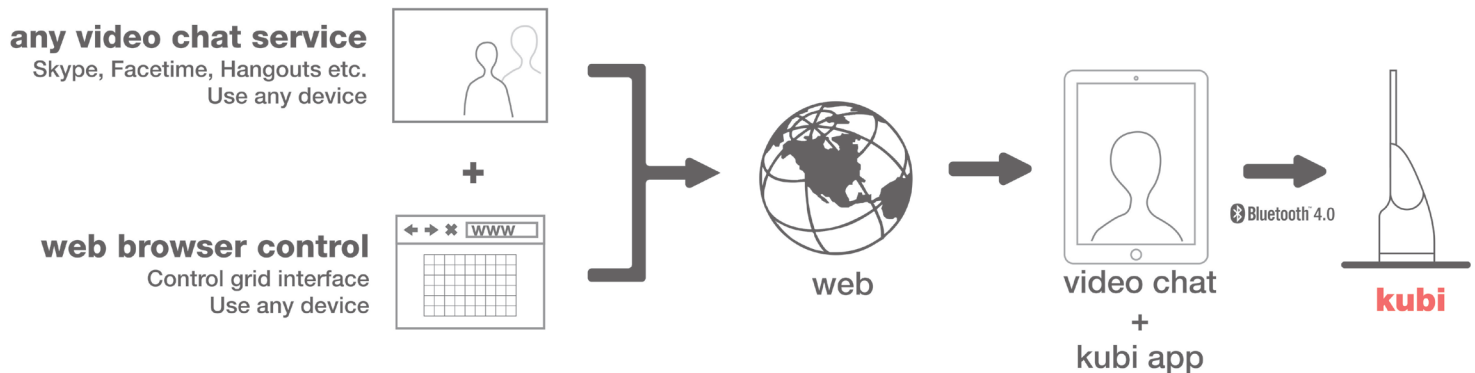

### Increasing Presence and Attention for Remote Workers and Colleagues

Kubi is a robotic tablet stand combined with a video feed that offers telecommuters and their colleagues at work more engaging video conferencing. By allowing remote control of the tablet stand during a video call, users have control over their point of view. This benefits worker when they are telecommuting to a meeting and helps their co-workers and managers stay engaged with them. Motion of the robot and high quality video provide more telepresence, giving the parties a greater connection to the educational setting.

### Increasing Meeting Efficiency and Reducing Travel Time

Telepresence makes remote workers literally more “present” in conference rooms, helping everyone communicate better in meetings. In one-on-one meetings, KUBU more body language and facial expressions to help managers and remote workers connect. When Kubi is installed in multiple locations across an organization, people can simply “teleport” from one place to another, anywhere in the office - or the world - with zero travel time. This is a far superior system to very costly roving robots, which are not truly independent and often need assistance to move around.

### Benefits of KUBI

- Affordable, easy, portable, engaging remote working
- Helps workers be more “present” with colleagues and vice versa
- Parties on KUBI can turn to look at each person or pan to see details
- Makes Interactions more interesting than conventional video calls
